WESS

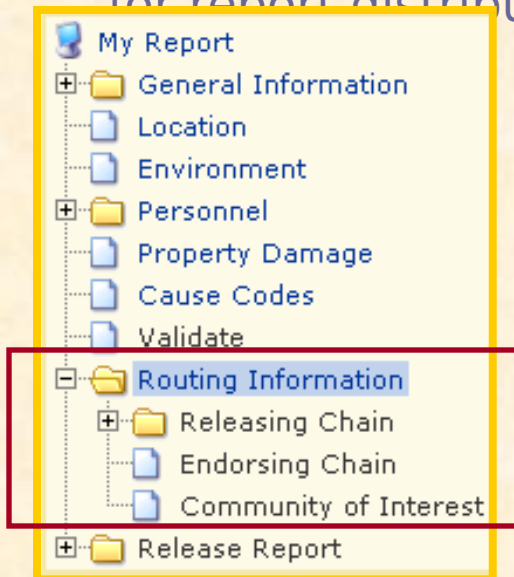

Module 8

Routing
Reports

What is Report “Routing”?

Routing A Report: In the Report Directory tree at lower left, there is a folder entitled “**Routing Information**”. This function allows a Customer to establish distribution list(s) for a Mishap or Hazard report **prior to its Release**. There are three (3) primary purposes for report distribution lists:

Releasing Chain: Used to establish routing through the appropriate approval authority for review or revision prior to release of the report. Any person in the chain may modify the chain and edit or release the report.

Endorsing Chain: Required only for (but not limited to) Class A and certain Class B Mishaps. Routes a report through a designated chain of command to receive upper echelon

Community of Interest: The concept is based on the AIG and CAD endorsement. (Note: This feature is due to deployment in September 2004.) Members of a COI who may benefit from Lessons Learned receive email notification that a read-only version of the mishap report is available for review. ◀ ▶ ◀ ▶

What is a Releasing Chain?

 **Routing a Report:** A WESS function allowing a Customer to send a Draft Mishap or Hazard report to another customer(s) **prior to its Release**. This is usually done, within the Reporting Activity, for the purposes of notification, soliciting approval or additional data entry or revision by others

 Usually a “**Vertical**” process – Up or down the Chain of Command, inside and/or outside of the reporting activity.

 By clicking on “**Releasing Chain**” in the report Directory Tree, a drafter may enter as many users by name & email as needed for review or editing purposes. WESS is flexible & places no restrictions on the releasing chain.

 Each recipient of a Routed Report will receive an **Email Notification**, in their Outlook Inbox, that a report is awaiting review

If the new releasing chain sequence is satisfactory, Click "**Save**".

Note that the Review Sequence has been changed in the Summary, the Directory Tree and in the Add / Edit / Delete Releasing Chain screen.

Chain of Command Confirmation

The screenshot displays the WESS (Naval Safety Center) interface. On the left is a sidebar with 'Activities' (BASH, Save as template, Share report, Return home, Generate PDF, Feedback Form, Logout) and 'My Report' (General Information, Location, Environment, Personnel, Property Damage, Cause Codes, Validate, Routing Information, Releasing Chain, Endorsing Chain, Community of Interest, Release Report). The main content area is titled 'Safety Hazard/Mishap Reporting System - FOR OFFICIAL USE ONLY' and 'Current Releasing Chain of Command'. A blue box highlights the message 'Releasing Chain Saved For This Report.' Below it, details are listed: 'Releasing Chain Created: 06/02/2004', 'Releasing Chain Completed: In Process', 'Releasing Chain Created By: sc90pyw', and 'Releasing Chain: Pamela Webster Charles Almond'. A 'Next' button is circled in red. A large text box in the center states: 'WESS will confirm that the releasing chain shown above has been saved. Click **Next**'.

User Tip: The capability to create **Report Templates** was introduced earlier, in Module 5. For Customers who consistently use the same principal review authorities, it is highly recommended that **Releasing Chains** be saved in the **report templates**. This precludes re-entry of this data with each type of report and saves entry time. Of course, changes can be made to any specific report built from a template, as needed at any time.

Other Methods of Routing Reports

The screenshot shows the WESS (Naval Safety Center) interface. On the left is a sidebar with 'Activities' (BASH, Save as template, Share report, Return home, Generate PDF, Feedback Form, Logout) and 'My Report' (General Information, Location, Environment, Personnel, Property Damage, Cause Codes, Validate, Routing Information, Release Report). The 'Routing Information' folder is expanded, showing 'Releasing Chain' (Pamela Webster, Charles Almond), 'Endorsing Chain', and 'Community of Interest'. The main content area is titled 'Routing Information Maintenance Window' and contains instructions: 'Please select the Routing Information option as required. **Releasing Chain of Command** maintains the Command Review Chain prior to entry into the WESS System. The Releasing Chain of Command can be created or modified. Select the following link to access the Releasing Chain of Command process.' followed by a link 'Releasing Chain of Command'. Below this, it says 'Communities of Interest are Commands that are interested parties to the information contained in the report. Select the following link to access the Communities of Interest process.' followed by a link 'Communities of Interest'. At the bottom, it says 'Select the Next Button to continue.' and a 'Next' button is visible.

Report Releasing Chain

Important Notes About Report Routing and Releasing

- WESS is designed to be as **flexible and adaptable** to the variety of reporting activities and their associated chains of command, as possible. WESS does not mandate routing of reports nor dictate a specific chain.
- Likewise, WESS places **no restrictions** on who may Review and Release a mishap or hazard report to COMNAVSAFECEN or others.
- Each Reporting Command has the authority and responsibility to determine the appropriate routing, review and release authorities consistent with it's organizational structure and with higher authority. It's the reporting activity that dictates what, if any, review and releasing chain is required.
- In the case of **Class A & certain Class B mishaps**, establishment of an **Endorsing Chain is Required** by OPNAVINST 5102.1D. WESS will provide the capability to track endorsements, recommendations and corrective actions through to completion and close-out. (Deploys Sep 2004)
